School-Home Letter

Vocabulary

acute triangle A triangle with three acute angles

line segment A part of a line that includes two points, called endpoints, and all the points between them

obtuse triangle A triangle with one obtuse angle

ray A part of a line, with one endpoint, that is straight and continues in one direction

right triangle A triangle with one right angle and two acute angles

Dear Family,

Throughout the next few weeks, our math class will be studying two-dimensional figures. The students will use definitions to identify and describe characteristics of these figures.

You can expect to see homework that includes identifying types of triangles and quadrilaterals.

Here is a sample of how your child will be taught to classify a triangle by its angles.

🔑 MODEL   Classify a triangle by the sizes of its angles.

Classify triangle *KLM*.

STEP 1

Determine how many angles are acute.

∠*K* is ___**acute**___.

∠*L* is ___**acute**___.

∠*M* is ___**acute**___.

STEP 2

Determine the correct classification.

A triangle with ___**3**___ acute angles is

___**acute**___.
Tips

Angle sizes

Angles are classified by the size of the opening between the rays. A right angle forms a square corner. An acute angle is less than a right angle. An obtuse angle is greater than a right angle and less than a straight angle.

To classify angles in a figure, use the corner of an index card as a right angle and compare.

Activity

Help your child commit most of the classifications of triangles and quadrilaterals to memory. Together, you can make a series of flash cards with the classifications on one side of the card and definitions and/or sketches of examples on the other side of the card.

Carta para la casa

Vocabulario

triángulo agudo Un triángulo que tiene tres ángulos agudos

segmento de recta Una parte de una línea que incluye dos puntos, llamados extremos, y los puntos que están entre ellos

triángulo obtuso Un triángulo que tiene un ángulo obtuso

rayo Parte de una línea recta, con un extremo y que continúa en una dirección

triángulo rectángulo Un triángulo con un ángulo recto y dos ángulos agudos

Querida familia,

Durante las próximas semanas, en la clase de matemáticas estudiaremos las figuras bidimensionales. Usaremos las definiciones para identificar y describir las características de esas figuras.

Llevaré a la casa tareas con actividades para identificar diferentes tipos de triángulos y cuadriláteros.

Este es un ejemplo de la manera como aprenderemos a clasificar un triángulo por sus ángulos.

🔑 MODELO · Clasificar un triángulo por el tamaño de sus lados

Clasifica el triángulo *KLM*.

PASO 1

Identifica cuántos ángulos son agudos.

∠K es **agudo** .

∠L es **agudo** .

∠M es **agudo** .

PASO 2

Determina la clasificación correcta.

Un triángulo con **3** ángulos agudos, entonces es **acutángulo** .

Pistas

Tipos de ángulos

Los ángulos se clasifican según el tamaño de la abertura entre sus rayos. Un ángulo recto forma una esquina recta. Un ángulo agudo mide menos que un ángulo recto. Un ángulo obtuso mide más que un ángulo recto y menos que un ángulo llano.

Para clasificar los ángulos de una figura, usa la esquina de una tarjeta como modelo de ángulo recto y compara.

Actividad

Anime a su hijo a memorizar las clasificaciones de los triángulos y los cuadriláteros. Puede hacer tarjetas nemotécnicas con las clasificaciones en un lado y las definiciones y/o ejemplos visuales en el otro lado de cada tarjeta.
Name ───────────────────────────

Lines, Rays, and Angles

Draw and label an example of the figure.

1. obtuse ∠ABC

Think: An obtuse angle is greater than a right angle. The middle letter, B, names the vertex of the angle.

2. $\overrightarrow{GH}$

**3.** acute ∠JKL

4. $\overline{BC}$

Use the figure for 5–8.

5. Name a line segment.
