

Dear Family,

During the next few weeks, our math class will relate both fractions and money to place value and will learn how to rename fractions as decimals. We will also add fractional parts of 10 and 100 and compare decimals through hundredths.

You can expect to see homework that provides practice with naming decimals in different ways, including renaming as fractions.

Here is a sample of how your child will be taught to write a decimal as a fraction.

MODEL Write Hundredths as a Fraction

This is how we will use place value to help write a decimal as a fraction.

Ones	.	Tenths	Hundredths
0	.	6	4

↑
decimal point

Think: 0.64 is the same as 6 tenths and 4 hundredths, or 64 hundredths.

$$\text{So, } 0.64 = \frac{64}{100}.$$

Vocabulary

decimal A number with one or more digits to the right of the decimal point

decimal point A symbol used to separate dollars from cents in money amounts and to separate the ones and tenths places in a decimal

equivalent decimals Two or more decimals that name the same amount

hundredth One of one hundred equal parts

tenth One of ten equal parts

Tips

A place-value chart can be used to help visually organize numbers in relation to the decimal place. The chart can be used to pair the numbers with words, and may enable a smooth transition between standard form, word form, and the decimal or fraction.

Activity

Use the relationship between dollars and cents and work together to express the value of a penny, nickel, dime, and quarter as a decimal and as a fraction of a dollar. Then make small groups of coins and help your child write the value of each group as a decimal and as a fraction.

Carta para la casa

Querida familia,

Durante las próximas semanas, en la clase de matemáticas relacionaremos tanto las fracciones como el dinero con el valor posicional y aprenderemos a convertir fracciones en decimales. También sumaremos partes fraccionales de 10 y de 100 y compararemos decimales hasta los centésimos.

Llevaré a la casa tareas para practicar la expresión de decimales de diferentes maneras, incluso la conversión en fracciones.

Este es un ejemplo de la manera como aprenderemos a escribir un decimal como una fracción.

Vocabulario

decimal Un número con uno o más dígitos a la derecha del punto decimal

punto decimal Un símbolo usado para separar dólares de centavos en cantidades de dinero y para separar el lugar de las unidades y los décimos en decimales

decimales equivalentes Dos o más decimales que nombran la misma cantidad

centésimo Una de cien partes iguales

décimo Una de diez partes iguales

MODELO Escribir centésimos como una fracción

Así es como usaremos el valor posicional para escribir un decimal como una fracción

Unidades	.	Décimos	Centésimos
0	.	6	4

↑
punto decimal

Piensa: 0.64 es lo mismo que 6 décimos y cuatro centésimos, o 64 centésimos.

Por tanto, $0.64 = \frac{64}{100}$.

Pistas

Una tabla de valor posicional se puede usar para ayudar a organizar visualmente números en relación con el lugar decimal. La tabla puede usarse para emparejar números con palabras y para facilitar la transición del uso de la forma normal a la forma en palabras y a la fracción decimal.

Actividad

Usen la relación entre dólares y centavos y trabajen juntos para expresar el valor de una moneda de uno, de cinco, de diez y de veinticinco centavos en forma decimal y como una fracción de dólar. Luego hagan pequeños grupos de monedas y ayude a su hijo/a a escribir el valor de cada grupo en forma decimal y como fracción.
